

ABSTRACT OF THE DISCLOSURE

A support bracket for mounting on a support rail for elevator doors disposed at a doorway between a floor of a building and an elevator hoistway. The support bracket
5 includes a transverse frame member and plural spaced apart hook members engagable with the door support rail. A depending member connected to the frame member supports hoisting equipment, such as a block and tackle. Retaining screws are mounted on the hook members and are engagable with
10 the support rail when the support bracket is in a working position to aid in retaining the hook members engaged with the support rail. The support bracket may be mounted on and demounted from the door support rail by one or more persons standing at the doorway.
